

MP MOVING PERMALLOY STEREO CARTRIDGE

Operation Manual

Read this operation manual before use.
And keep it handy for reference as
needed.

MADE IN JAPAN

Thank you for your purchasing Nagaoka MP cartridge

The MP cartridge power generation mechanism, an IM type, is that the magnet outside the vibrating system magnetizes the vibrator. The set magnet selected among the world-proven audio parts uses samarium cobalt magnet that produces the extremely strong magnetic force, and the vibrator uses a pipe of super permalloy that features high permeability. These compact contribute to low distortion in the wide range.

Also, the pole piece cylinder uses carbon fiber reinforced plastic to prevent electrostatic noise and to get high strength. And the shield case is made of super permalloy. These help to control unnecessary resonance and maintain high SN ratio.

● Precautions when using

The MP cartridge is factory-adjusted in very accurate way so be careful not to drop it or touch the stylus tip.

Keep the stylus tip and the disc grooves free of dirt, dust etc. Playing a disc with foreign matter causes damage to the stylus tip and the disc grooves. If dust is stuck to the stylus tip, carefully brush it off with a soft material in a direction from the back to the front side of the stylus tip.

Recommend using the stylus tip cleaner (High-Clean #801/2 optional).

● Precautions when installing

Properly install the MP cartridge on the head shell to prevent resonance. Also, connect the lead wires correctly. Do not attempt to solder the connections. Failure to observe this may cause disconnection and other failure.

● How to install MP cartridge

To protect the stylus tip remove the stylus and the stylus cover in advance.

Connect the lead wires to the cartridge terminals according to the matching symbols and colors.

Install the cartridge straight, not inclined.

Adjust overhung properly, referring to the operation manual of the record player.

● How to replace the stylus

1. Turn off the amplifier and the record player.
2. Set the tone arm on the arm rest, and remove the head shell with the cartridge.
3. Slowly remove the stylus first and then install the new stylus

For MP-300/500, use the accessory hex wrench to replace the stylus. Fit the hex wrench on the screw on the side of the stylus knob as shown and turn it counterclockwise to remove the screw and the stylus. To install the new stylus reverse the removal procedure.

● Stylus pressure adjustment

Maintain the stylus pressure within the specified range in the specifications. The stylus pressure value is in ambient temperature 20°C. When the temperature is low, set the stylus pressure a little higher.

For detail about the stylus pressure adjustment, refer to the operation manual of the record player or the tone arm.

● Stylus replacement interval

The stylus replacement interval varies depending on the using conditions. But for general use at home, the reference time is 150-200 hours in which the stylus begins to wear and the tone quality deteriorates. Recommend replacing the stylus as early as possible to enjoy clear tone for a long time and not to damage the disc grooves.

For the replacement stylus, refer to the specifications

For care of the disc and the stylus, refer to the HP: <http://www.nagaokatrd.co.jp/life>

Specifications	MP-500H	MP-300H	MP-200H
	MP-500	MP-300	MP-200
Output voltage	3 mV (5cm/sec)	3 mV (5cm/sec)	4 mV (5cm/sec)
Frequency characteristic	20–25,000 Hz	20–25,000 Hz	20–23,000 Hz
Channel separation	27 dB (1 KHz)	25 dB (1 KHz)	25 dB (1 KHz)
Channel balance	1.0 dB or less	1.0 dB or less	1.5 dB or less
Load resistance	47 K Ω	47 K Ω	47 K Ω
Canti-lever	Boron	Boron	Boron
Stylus tip	Line contact, diamond	0.4 x 0.7mil elliptical, diamond	0.4 x 0.7mil elliptical, diamond
Stylus pressure	1.3–1.8 g	1.3–1.8 g	1.5–2.0 g
Cartridge's weight	8 g	8 g	6.5 g
Head shell's weight	13.5 g	13.5 g	9.5 g
Replacement stylus	JN-P500	JN-P300	JN-P200

Specifications	MP-150H	MP-110H	MP-100H
	MP-150	MP-110	MP-100
Output voltage	4.5 mV (5cm/sec)	5 mV (5cm/sec)	5 mV (5cm/sec)
Frequency characteristic	20–20,000 Hz	20–20,000 Hz	20–20,000 Hz
Channel separation	24 dB (1KHz)	23 dB (1 KHz)	22 dB (1 KHz)
Channel balance	1.5 dB or less	1.5 dB or less	2 dB or less
Load resistance	47 K Ω	47 K Ω	47 K Ω
Canti-lever	Hardening taper aluminum alloy	Aluminum alloy	Aluminum alloy
Stylus tip	0.4 x 0.7mil elliptical, diamond	0.4 x 0.7mil elliptical, bonded diamond	0.6mil conical, bonded diamond
Stylus pressure	1.5–2.0 g	1.5–2.0 g	1.8–2.3 g
Cartridge's weight	6.5 g	6.5 g	6.5 g
Head shell's weight	9.5 g	9.5 g	9.5 g
